Subject: Re: Shipment for Studies (AA05624)
Sensitivity: Confidential

We estimate that our humidor can hold approximately 20-22 cases (over 650 cartons) at one time. We can talk about possibilities. Kim mentioned that they have permission to rotate stock into their humidor as stock is used. The other option is to have all 42 cases shipped to the distributor and have them deliver 22 cases to us and hold the other 20 cases for a second delivery. This would only make sense if the local distributor hold their cigarettes in humidity controlled conditions. If they do not, then it would make sense to ship all 42 cases to us and have us rotate stock into our humidor. I know that we have more of an issue with shipping regarding the tax stamp issue than the Lincoln site, so we probably need to be proactive and have the first shipment larger. Debbie Newman worked with us on shipping for the last study we did for your company if she can be of any assistance. Please let me know if I can provide any further information to you.

Lori:
Kim Prchal provided me with your name as the contact point for the
pharmacy
at the PHX site.

I am in the process of initiating the shipment of study product to the PHX site for the clinical conduct of the MARL/01/03 and MARL/02/03 studies. Because we will need to coordinate shipment of this product through a wholesaler, we'd like to minimize the number of shipments to PHX. I would like to send a total of 42 cases of cigarettes to PHX in the first shipment, but I am uncertain of whether your site could accommodate such a quantity. Could you please advise (no later than this Wednesday) what the maximum quantity of cigarettes is that you would be able to store (at one time) for these studies?

Once I have that information I can determine how many shipments we need to be planning for.

If you have questions, please feel free to contact me.

Thanks,
Valerie
